Active Add-ons Popularity

Understanding which add-ons are most popular among customers

Insights & Analysis by Vegiro

- The most utilized add-ons are 'None', 'Music Pack', 'OTT Pack', 'Gaming Pack', and 'Data Boost', each with a count of 4.
- With equal popularity among the top add-ons, customer satisfaction may be influenced by the availability of diverse options.
- The presence of multiple add-ons with the same count suggests a balanced preference among customers, potentially enhancing overall satisfaction.

Key Takeaways

Strategic recommendations based on the analysis

- 01 Enterprise Dominance**
The Enterprise segment is the top revenue generator, contributing █86,254 monthly. This highlights the importance of targeting and retaining enterprise clients for sustained growth.
- 02 Churn Risk Awareness**
With 28% of customers at Medium or High risk of churn, proactive retention strategies are crucial. The presence of 12 customers at Medium risk indicates an opportunity for targeted engagement.
- 03 Age Group Insights**
The age group of 24 has the highest frequency with 4 customers, suggesting a potential focus area for marketing efforts. Additionally, the 31, 28, 26, 45, and 34 age groups, each with 3 customers, could also be targeted.
- 04 Voice Usage Patterns**
The average voice usage is approximately 590.5 minutes, with 189 and 204 minutes being the most common recorded usages. Understanding these patterns can help in tailoring voice plans and promotions.
- 05 Add-ons Popularity**
The equal popularity of add-ons like 'None', 'Music Pack', and 'OTT Pack', each with a count of 4, suggests customer satisfaction may hinge on diverse options. This insight can guide future add-on development and marketing strategies.
